I tried few stuff for my Verruca for nearly 3 months with out any results before pharmacist recommended this. A bit expensive at €24 but it worked for me. Verruca turned black in 4 weeks. Need to file the skin a bit before you apply the pen. Good stuff. Highly recommended.

Tried this after a few other products and so much better for it. I was on my way from the gym, called into the chemists, forgot I left most of my cash at home. I was lucky that I had enough to pay for EndWarts PEN. I could have gone for a cheaper option but the chemist suggested this as it was just under what I had in my pocket. So Glad its gone thanks to EndWarts.

Tried other products on the market but some had a burning sensation after application. Tried EndWarts which did not sting me/feel a burning sensation when putting it on. Couple of weeks now and its almost disappeared. Brilliant!

My 7 year old son Hugo had the most uncomfortable experience with a verruca on each of his feet for a number of weeks. I was told by a friend to try EndWarts – she used it on her daughter's warts and was delighted with the results.

Within 2 weeks we could see results. Initially I was worried as Hugo's verrucas had become bigger and softer. Then after out 4th week of treatment the verrucas fell off and Hugo was left with perfectly formed skin underneath.

EndWarts was easily applied and caused no pain or stress to me or Hugo. I will definitely buy EndWarts for any future warts or verrucas, and the pen device made it very easy to use.

I had a really annoying wart on my index finger since my teens (I'm now in my early 40s) - just where my pen rests against my finger. Over the years I've tried every lotion and potion available. My doctor froze it and a dermatologist also had a go at freezing it, yet it always came back. One of the mothers at my gym told me about EndWarts - but as you can imagine I was pretty sceptical about it. After I used it, it got smaller and smaller and completely disappeared in after about 6 weeks. I kept expecting it to come back but it hasn't. That was four years ago. Really brilliant stuff, it definitely worked for me.

What is EndWarts

EndWarts is a new effective topical solution for self removal of warts on hands, feet, elbows and knees.
